DOUTHITT Model MAGIC 83 Integrator

The Model MAGIC 83 is a combination light integrator and digital timer. Variations in light affect the quality of exposed film, plates, screens or proofs. With microprocessor technology, this precision instrument automatically compensates for light variations by adjusting the length of the exposure to continually provide the correct amount of light. These integrators can also be set up to control vacuum draw down time to eliminate yet another variable.

FEATURES

- 10 Programmable memories
- Large, easy-to-read display
- Counts down and resets after each exposure
- Vacuum time delay
- Remote control of two lights or three intensity levels
- Simple design for easy operation
- Complete 15 foot photo cell. Unit can be ordered with different photo cells to better fit specific needs
- Photometer
