Dynamesh DYNABOND Two-Part Quick Set Frame Adhesive

DYNABOND Two-Part Quick Set Frame Adhesive is a quick-drying two-component adhesive with superior chemical abrasion resistance and quicker cut-out time than standard DYNABOND Two-Part Frame Adhesive.

It creates a tight bond between the mesh and wood, aluminum, or steel frames. It is designed for medium to high mesh counts and works well with automatic washout and reclaiming devices.

The DYNABOND Two-Part Quick Set Frame Adhesive kit includes both the adhesive and catalyst.

FEATURES

- Mesh cutout in as little as 15 minutes
- Good chemical solvent resistance
- Super-flexible adhesive prevents cracking
- Shelf life of 2 years for unopened product, 48 hours mixed when stored in an airtight container
