

## MESH PREP + DEGREASER

DYNACHEM Mesh Prep + Degreaser is a ready-to-use product based on a revolutionary approach to preparing mesh for emulsion coating and film application. Its unique formulation of water based polymeric components eliminates many common screen making problems.

### FEATURES

- Incorporates a unique mesh treatment which eliminates pinholes and fisheyes. This results in better quality screens and dramatic reductions in both labor and supplies used for touch up.
- Cleans and prepares the mesh more thoroughly than conventional products, ensuring better adhesion, durability, and image definition.
- Conditions the mesh to allow smooth, uniform flow of direct emulsions. The result is better thickness control, elimination of thin weak spots, and reduced squeegee wear.
- Provides better emulsion and film adhesion, a smoother surface, and more uniformity, directly contributing to longer print durability on-press.
- Can be reduced with 20 parts water and used as a simple mesh degreaser.

### INSTRUCTIONS

- Ensure screen is clean of all ink, emulsion, or other contaminants.
- Mix Mesh Prep + Degreaser at a ratio of 1:20 with water.
- Pre-rinse both sides of mesh with water.
- Apply Mesh Prep + Degreaser to both the ink and print side of the screen using a brush, wipe, scrub pad, or spray, and scrub the product in.
- Use a low pressure flood rinse, starting at the top of the screen, until the entire product has been rinsed off.
- Rinse again, ensuring no residue remains on either the mesh or frame.

### PROPERTIES

APPEARANCE / ODOR

**Clear liquid,  
mild odor**

SPECIFIC GRAVITY

**1.0 @ 68°F (20°C)**

pH

**Neutral**

VOC

**None**

FLASH POINT

**None**

INK TYPES

**Not Applicable**

PRODUCT FAMILY

**Textile,
