# Grünig G-STRETCH 201 Duplex Clamp

The G-STRETCH 201 is a rugged duplex stretching clamp. The wider G-STRETCH 201 clamp allows for the use of fewer clamps on stretch devices, making for a more efficient, optimized, stretching process.

The ergonomic structure of the G-STRETCH 201 clamps allows for easy opening and closing. Additionally, due to the wide opening of the upper stretching beam and the mesh insert edge, the mesh can be inserted rapidly and in true alignment with the thread. The lower half of the clamp remains static while the upper part effectively stretches the mesh without slipping.

The G-STRETCH 201 can be easily repositioned on Grünig stretching devices. This allows it to easily compensate for high extension of the mesh, in either weft or warp direction, when the tension is increased.

## FEATURES

- Automatic mechanical amplification of grip force
- No parts require calibration
- Clamps are integrate with V2A guideway system
- High quality aluminum construction
- Existing stretch devices (H-21, H-24 and H-28) can be retrofitted with G-STRETCH 201 duplex clamps, as well as updated guideways
