# Newman Roller MZX™ Series

Newman Roller MZX™ Series Ultra-Light retensionable frames are well known throughout the printing industry. These light weight, yet strong, aluminum frames are designed to deliver high tension, resulting in greater accuracy and increased production.

MZX Series frames can be tensioned manually or automatically, using Newman Roller Master™ stretching machines.

MZX Series frames have a smaller roller diameter than the M3 Series, and a lower maximum tension capacity of 35 Newtons. They are Newman's "manual" frames, and are more suited for manual shops that need to print large images, or auto shops that do mostly small volume work.

## FEATURES

- High quality, durable construction
- Designed for manual printing at high tension

## PRODUCT OPTIONS

Model	Size
MZX™	18 x 20 in (45.72 x 50.80 cm)
MZX™	23 x 26 in (58.42 x 66.04 cm)
MZX™	23 x 28 in (58.42 x 71.12 cm)
MZX™	23 x 31 in (58.42 x 78.74 cm)
