Protec TDS-12A Digital Handy Scale

The TDS-12A Digital Handy Scale is a compact, yet highly precise digital length gauge designed for use with photographic masks, screen masks, films, and printed circuit boards. It is perfectly suited for quality control work—accurate to the micrometer and designed to handle the complicated data processing necessary for such applications. It does this via the optional DP-1VR mini processor and printer.

Additionally, the TDS-12A's lightweight design and built in LED illumination make it exceptionally portable.

FEATURES

- Measurement range of 12 mm on either axis
- 1 μm minimum measurement unit
- 100X magnification

PRODUCT OPTIONS

Microscopic Eyepieces

20X, 40X, 60X
